

FFKM O-RINGS PRODUCER

1) Factory certifications overview and relevant details

All our FFKM Ultima O-rings are manufactured by a historic partner in an ultra-modern factory who has worked closely with us on the subcontract manufacturing of our lineup of high performance O-rings since 2004. The factory is certified by the DNV-GL organization according to the following standards :

Qualité System Certification ISO 9001: 2015

What is ISO 9001?

ISO 9001 is a globally recognized standard for quality management. It helps organizations of all sizes and sectors to improve their performance, meet customer expectations and demonstrate their commitment to quality. Its requirements define how to establish, implement, maintain, and continually improve a quality management system (QMS).

Environmental System Certification ISO 14000: 2015

What is ISO 14001?

ISO 14001 is the internationally recognized standard for environmental management systems (EMS). It provides a framework for organizations to design and implement an EMS, and continually improve their environmental performance. By adhering to this standard, organizations can ensure they are taking proactive measures to minimize their environmental footprint, comply with relevant legal requirements, and achieve their environmental objectives. The framework encompasses various aspects, from resource usage and waste management to monitoring environmental performance and involving stakeholders in environmental commitments.

Energy Management System 50001 : 2018

What is ISO 50001?

For organizations committed to addressing their impact, conserving resources and improving the bottom line through efficient energy management, we developed ISO 50001.

Designed to support organizations in all sectors, this ISO standard provides a practical way to improve energy use, through the development of an energy management system (EnMS).

Safety System Organisation 45001: 2018

What is ISO 45001?

ISO 45001 is an international standard that specifies requirements for an occupational health and safety (OH&S) management system. It provides a framework for organizations to manage risks and improve OH&S performance. The standard establishes criteria for an OH&S policy, objectives, planning, implementation, operation, auditing and review. Key elements include leadership commitment, worker participation, hazard identification and risk assessment, legal and regulatory compliance, emergency planning, incident investigation and continual improvement.

By recycling our materials, we create a healthier planet for ourselves and future generations. Conserve natural resources: Recycling reduces the need to extract resources such as timber, water, and minerals for new products. This is why 95% of waste from our partner factory is recycled.

Why is clean air important to us?

Breathing clean air can lessen the possibility of disease from stroke, heart disease, lung cancer as well as chronic and acute respiratory illnesses such as asthma. Lower levels of air pollution are better for heart and respiratory health both long- and short-term. That's why our partner factory air quality is measured at 0.06 mg/M3, well below the limit set at 10 mg/m3.
